

FABRIFAST

QUICK RESPONSE
METAL FABRICATION

A PERSONAL COMMITMENT IN EVERY JOB WE DO

FabriFast Engineering accepts CAD files in a variety of formats, including SolidWorks, DXF or IGES formats.

The traditional method of judging sheet metal fabricators has been by the length of their equipment list or the size of their production floor. Buyers have been conditioned to believe that “big company” customer lists, excess capacity and redundant processes were indicators of production effectiveness.

But times have changed.

FabriFast represents a new breed of sheet metal fabricator, one that knows the only true way to judge a company is by results. Quick quote turnaround. Exceptional production speed. Consistent high quality. Complete, on-time deliveries. And relentless cost control.

As the founding owners of FabriFast, we draw on decades of manufacturing and management experience in related public and private companies. We know the difference between results and effort. Most of all, we recognize the importance of our personal commitment in delivering on the FabriFast promise of superior performance in every job we do.

A FRESH APPROACH TO METAL FABRICATION

CNC machines and advanced metal forming software help ensure quality and consistency from run to run.

Many foresee a bleak future for U.S.-based sheet metal fabrication. We disagree. It is true that high-volume, low-mix metal fabrication is increasingly moving to lower-cost countries. But the need for customized, quick-response, cost-effective sheet metal fabrication is vibrant and growing.

And that's what FabriFast is all about.

Built from the ground up to address today's manufacturing environment, FabriFast offers our customers unique advantages in speed, cost and quality, with no excess baggage to weigh us down.

If, like us, you value speed and responsiveness, detest waste and needless overhead, and believe in the capability of the American worker, FabriFast should be on your short list of firms to consider for your next sheet metal fabrication job.

FabriFast is equipped to work with a variety of materials including carbon, galvanized and stainless steel, as well as aluminum.

FabriFast provides spot, MIG and TIG welding capability.

We exclusively use "air bend" forming techniques to increase speed and reduce customer tool costs.

FABRIFAST ADVANTAGES

Best-in-class responsiveness

- Quotes in one to two days
- Production runs in two weeks
- Simple, intuitive information systems

Structured for lower cost

- Highly skilled, flexible workforce
- Lean Manufacturing designed into every process
- Advanced technology, highly productive equipment
- Low overhead, high asset utilization
- Opportunity for joint cost-of-ownership savings

Measured quality and delivery

- Publicly posted performance ... nothing hidden from the customer
- Advanced process control from start to finish
- Our measure: 100% complete and on time, or it's late!

Owner involvement

- Experience and commitment
- Complete accountability
- Streamlined decision-making
